

Endpoint Security Tool

Keep your company's data safe from leakage and theft

AccessPatrol Device Security

With the influx of portable storage devices and removable media, data theft is becoming an increasing threat to organizations. Devices such as USBs, WiFi, FireWire, Bluetooth, iPods, MP3s connect seamlessly to company networks, without IT administrators having any knowledge that their company data is being exposed.

Portable devices also provide an easy entryway for infecting systems with viruses or malicious software, thus compromising an organization's network.

Codework's endpoint security solution, AccessPatrol, provides a comprehensive solution for securing company devices to minimize unauthorized access to proprietary information.

AccessPatrol manages the security of the following types of devices:

Storage Devices:

- USB
- CD/DVD
- Floppy
- Tape
- External Hard Drive
- FireWire

Communication Ports:

- Serial
- Parallel

Wireless Devices:

- Bluetooth
- Infrared
- Wi-Fi

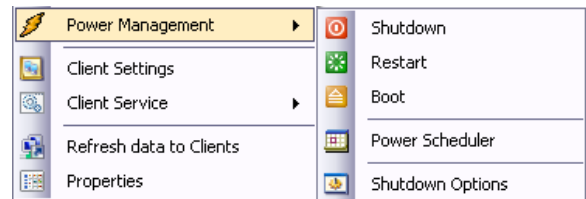

Other:

- Digital camera, webcam
- iPhone, Mobiles
- Sound Cards

AccessPatrol Power Management

Another challenge facing organizations is the unnecessary wastage of energy when workstations are left running after hours. With rising energy costs, administrators are turning to more effective solutions for managing energy consumption in the workplace..

AccessPatrol provides an effective method for power management. With a simple click of the mouse, computers can be remotely shutdown or booted. This function can also be scheduled to force a shutdown of the PCs at a specific time, e.g. after work hours, or schedule a boot of the PCs at the beginning of a work day.

Control your computers from a central console

Supported Operating Systems

AccessPatrol Server and Console

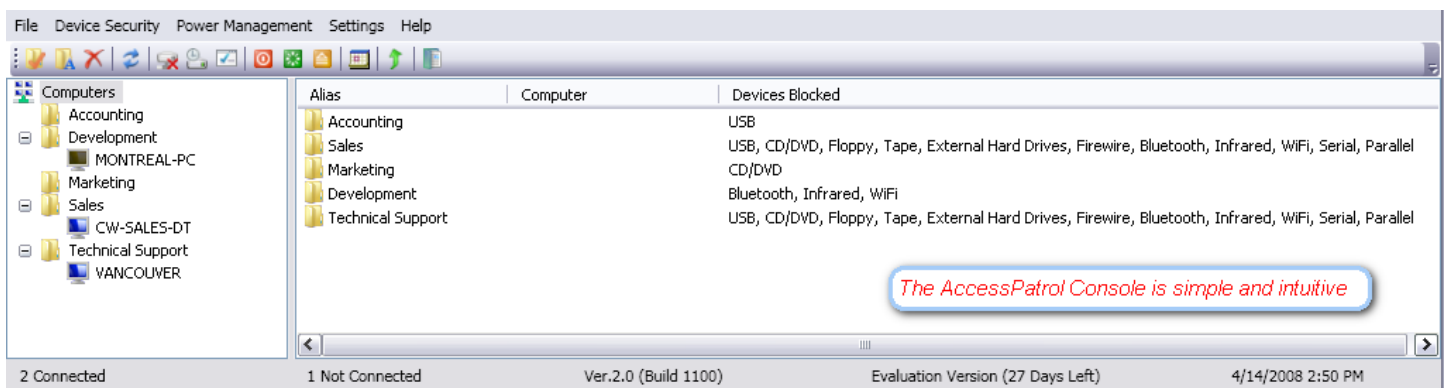

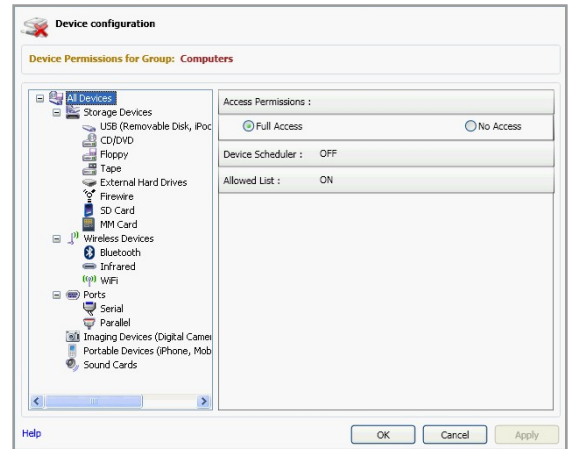

Windows 2000/2003, XP, Vista
Internet Explorer 6 or 7

AccessPatrol Client

Windows 2000, XP, Vista

AccessPatrol Features

- ❖ **Prevent data theft:** Unauthorized access or transfer of data through USB, CDs, iPods, MP3s, FireWire, WiFi, Bluetooth on all company systems, can be managed centrally through AccessPatrol's web console.
- ❖ **Centralized Security Management:** From a centralized web console, endpoint security can be applied to all device entry points across the company. The web based console, provides additional flexibility in accessing the AccessPatrol console from any location to authorized administrators only.
- ❖ **Device Access Permissions:** Security levels to devices include full access, read only or no access.
- ❖ **Off Site Device Management:** When a laptop or computer is offsite, AccessPatrol can still manage the security of endpoint devices.
- ❖ **Allowed List:** While AccessPatrol can restrict access to all endpoint devices, the Allowed List feature restricts access to only company authorized devices of USBs, FireWire, External Hard Drives. This minimizes leakage of sensitive data or infection of systems through unapproved or personal employee devices.
- ❖ **Scheduler:** device access privileges at only specific times can be accommodated through the scheduler. For examples, the IT team can be scheduled to have access to CD/DVDs for software installation during after hours, when most users are away.
- ❖ **Power Management:** Remotely shutdown, restart and boot computers on a network. These features can also be scheduled to run automatically at designated times through the Scheduler.
- ❖ **Remote Install:** the AccessPatrol client can be deployed from the server to all the computers on the network. The setup file for the client can be integrated into Active Directory's software deployment.
