- ✓ **Remotely govern energy usage of PCs**
- ✓ **Schedule PCs for off hour shut down**
- ✓ **Program boot up at start of work days**
- ✓ **Automate restarts after installations**
- ✓ **Conserve energy and reduce costs**

Introducing Power Management for Your Network!

enPowerManager provides an effective tool for energy management across an enterprise. Conserve energy, reduce costs, and help protect the environment—all from the central Currentware console!

- ✓ **Govern Energy Usage:**
Administrators can manage energy consumption of all company PCs remotely.
- ✓ **Schedule Shutdown:**
Reduce energy usage and decrease costs through scheduling shutdowns during off hours.
- ✓ **Manage Boot Up**
Minimize energy expenditures by scheduling automatic boot up of systems at the start of work times.
- ✓ **Remote Energy Management:**
Ability to remotely control the power functions of your workstations.

Energy Facts

- ✓ The United States has about 71 million PCs and monitors at work. The energy these computers use is equal to the combined electrical generation of New York State's 6 nuclear power plants in 2001.
- ✓ The 71 million computers and monitors in America use more electricity than all other forms of office equipment combined.

Supported Operating Systems:

enPowerManager Server/Console:
2003/2008, XP, Vista and Windows 7

enPowerManager Client:
2003/2008, XP, Vista and Windows 7

What's New

Improved Console and Client Architecture

A new designed console, the **CurrentWare Console**, provides a more powerful and robust interface for administering the enPowerManager policies. The new client, the **CurrentWare Client**, can remotely be installed from the Console or through Active Directory.

Terminal Server Compatibility

enPowerManager can now support a Terminal Server environment. Effectively manage energy consumption policies of both thin and fat clients.
